

SELECTIVE VIEWING OF VIDEO BASED ON ONE OR MORE THEMES

ABSTRACT OF THE DISCLOSURE

A method for displaying programmatic content comprising a first step of indexing
5 within a table segments of the programmatic content using at least two possibly overlapping
thematic categories, then enabling user selection of at least one of the thematic categories for
viewing. The segments of programmatic content are arranged into a video sequence
responsive to the user-selected thematic category. The video sequence is then displayed in
substantial synchronicity with annotative information associated with a currently viewed
10 segment of the video sequence.
